DETAILED ACTION

1. The amendment filed 05/08/2007 has been received and considered. Claims 1-16 and 18-19 are presented for examination. Claims 1-16, 18-27 were previously rejected on 02/08/2007 and claim 17 was objected to as being dependent upon a rejected base claim, but would be allowable in rewritten in independent form.

Allowable Subject Matter

2. **Claims 1-16 and 18-19** are allowed.

3. The following is an examiner's statement of reasons for allowance:

While Joseph Glaz and N. Balakrishnan (Scan Statistics and Applications) teach different spatial scan statistics in a general framework that incorporates two-dimensional scan statistics on the plane or on a sphere, as well as three-dimensional scan statistics in space or in space-time, Toyama (Patent No.: US 6,229,918) teaches a system and method for automatically detecting clusters of data points within a data space, Martin Kulldorff and Neville Nagarwalla (Spatial Disease Clusters: Detection and Inference) teach a method of detection an inference for spatial clusters of disease, M Kulldorff and WF Athas and EJ Feurer and BA Miller and CR Key (Evaluating Cluster Alarms: A Space-Time Scan Statistic and Brain Cancer in Los Alamos, New Mexico) teach a space-time scan statistic useful for evaluating space-time cluster alarms and illustrates the method on a recent brain cancer cluster alarm in Los Alamos N.M., none of these references taken either alone or in combination with prior art of record disclose a

system for detecting clusters in space and time using input data on occurrences of phenomenon and characteristics at a plurality of locations and times comprising:

(claim 1) "a convex container module determining at least one solution corresponding to a selected convex container shape from the plurality of candidate solutions, *wherein the convex container module determines a solution that maximizes a measure representing the equality between the set of points in the given candidate solution and the set of points included in the solution, given the selected convex container shape*"

in combination with the remaining element and features of the claimed invention.

It is for these reasons that the applicant's invention defines of the prior art of record.

Conclusion

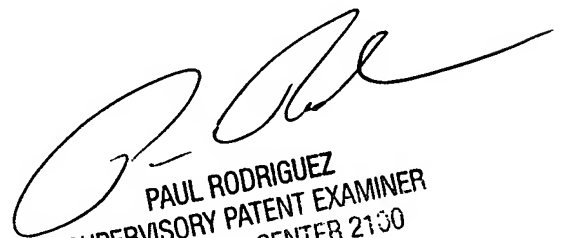

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jonathan J. Teets whose telephone number is (571) 270-1321. The examiner can normally be reached on Mon through Fri, 8:30am - 6:00pm.
